

Quadrilaterals

Classify each polygon in as many ways as possible.

1.

2.

3.

The measures of three angles of a quadrilateral are given. Find the measure of the fourth angle and classify each quadrilateral according to its angles.

4. $125^\circ, 55^\circ, 125^\circ$

5. $110^\circ, 100^\circ, 80^\circ$

6. $90^\circ, 70^\circ, 150^\circ$

7. Draw a quadrilateral with one pair of parallel sides. One side is 1.5 in. The other side is 0.5 in. The bottom right and top right angles are 90° . The bottom left angle is 40° . Label the sides and angles.

8. A rhombus has one 65° angle and a 5 cm side. Is this enough information to find the remaining angles and side lengths? Explain.

9. Which pair of angles would be side-by-side in a parallelogram?

A $40^\circ, 40^\circ$ **B** $40^\circ, 140^\circ$ **C** $60^\circ, 110^\circ$ **D** $65^\circ, 105^\circ$

10. **Writing to Explain** What characteristics help you classify a quadrilateral as a parallelogram and not a rectangle? Explain.
